HOW TO READ A FACT SHEET

Details as on November 30, 2025

The below definitions are in alphabetical order.

AUM : Assets Under Management (AUM) refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.

Application Amount for Fresh Subscription : This is the minimum investment amount for a new investor in a mutual fund scheme.

Benchmark : A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-Year Gsec, etc.

Beta : Beta (β) is a measure of the volatility—or systematic risk—of a security or portfolio compared to the market as a whole (usually the S&P 500). Stocks with betas higher than 1.0 can be interpreted as more volatile than the S&P 500.

Entry Load : A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is Rs. 100 and the entry load is 1%, the investor will enter the fund at Rs 101.

Note: SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor.

Exit Load : Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is Rs 100 and the exit load is 1%, the redemption price would be Rs 99 Per Unit.

Fund Manager : An employee of the asset management company such as a mutual fund, who manages investments of the scheme.

Holdings : The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

IDCW : Income Distribution cum Capital Withdrawal is the new name for Dividend as per recent SEBI Guidelines.

Modified Duration : Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Minimum Additional Amount : This is the minimum investment amount for an existing investor in a mutual fund scheme.

Nature of Scheme : The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have subcategories.

NAV : The Net Asset Value (NAV) is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Rating Profile : Mutual funds invest in Fixed Income / Debt Securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the Debt Scheme.

SIP : Systematic Investment Plan (SIP) works on the principle of making periodic investments of a fixed sum. It works similar to a recurring deposit of a bank.

Standard Deviation : Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Sharpe Ratio : The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Yield to Maturity : The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

Total Expense Ratio - As on last day of the month & includes additional expenses provided in Regulation 52(6A)(b) and 52(6A)(c) of SEBI (Mutual Funds) Regulations, 1996 and Goods and Service Tax on Management Fees.

The Month That Was

The Indian indices continued the momentum built in October 2025 and made a new all-time high after 14-months as it surpassed its Sep'24 peak intraday, supported by rate-cut hopes from the US Fed and the RBI, signs of a resolution to the Russia-Ukraine war and easing oil prices. The Nifty gained 1.9% in the month. The mid-cap index also made similar gains, whereas the small-cap index underperformed and declined 3%. On the sectoral front, IT (+4%), auto (+3%) and Banks (+3%) were the top gainers, whereas realty (-5%), power (-5%) and metals (-3%) were the top losers.

Global markets ended mixed. Brazil (+6%), Indonesia (+4%) and Singapore (+2%) were the top gainers, whereas South Korea (-4%), Japan (-4%) and Thailand (-4%) were the top losers.

FII net outflows (ex of primary market subscription) however continued with selling of Rs 81.9 Bn moderated after three months of heavy selling (Rs 2.58 tn outflow YTD). Further INR/USD continues to depreciate with decline of 0.8% for the month and 4.7% for FYTD.

DII flows have moderated over the past couple of months as inflows in equity funds have become calibrated whereby in Oct'25, equity mutual funds (ex-arbitrage) saw inflows of INR 322bn (USD 3.6bn), 22% lower MoM. This follows a 3% MoM fall in inflows in Sep'25.

SIP inflows in Oct'25 increased over Sep'25 to INR 295bn (USD 3.3bn), taking total SIP AUM to INR 16.3trln (USD 183bn), 4.7% higher MoM.

Outstanding SIP accounts in the country increased by 1.5mn MoM, while the number of new SIPs registered (gross) increased by 0.2mn from 5.8mn in Sep'25 to 6.0mn in Oct'25. Further, closure of SIP accounts stood at 4.5mn, taking the ratio of discontinued SIPs as a % of new SIPs to 75%.

Macros Reign During the Month

There were multiple developments across the month where on the global side- The US president signed the deal to end the US government shutdown with crude oil prices faced downward pressure as expectations of a Russia-Ukraine peace agreement gained momentum, raising hopes for a potential boost in global oil supply. Further there were meaningful sell off in AI stocks on valuation concern with Bitcoin cryptocurrency seeing a sharp decline of nearly 17% for the month.

This has led to global conditions have turned more cautious — the Fed signalling a slower and more data-dependent rate-cut trajectory with global yields staying sticky.

From the domestic end there were meaningful events whereby

- The ruling NDA secured a majority in the Bihar Assembly elections, winning 202 seats out of 243. This is the 5th (out of 6) state election win (each with a much higher margin) since Jun'24 national elections for the NDA and re-establishes its dominance. The generous cash transfer schemes at the states and back-to-back tax cuts at the centre (Income tax cut in Feb'25 & GST cut in Sep'25) clearly tilts the preference towards consumption.
- The central government announced new schemes with an outlay of Rs 450 bn to support exporters providing moratorium on term-loan instalments due between Sept 25-Dec 25, interest calculated on simple-interest basis, longer credit windows and extended timelines for realising export proceeds together form a liquidity safety net for exporters caught in geopolitical crossfire.
- The central government has notified four labor codes enabling expanded social security coverage (to include gig/platform workers), promising gender pay parity, providing a statutory right to minimum wages for both organized and unorganized sectors and reducing the compliance burden for employers. Overall, the reforms should support formalisation, improve the operating environment for MSMEs and manufacturing, and broaden social security coverage, though with meaningful near-term cost adjustments across several sectors.

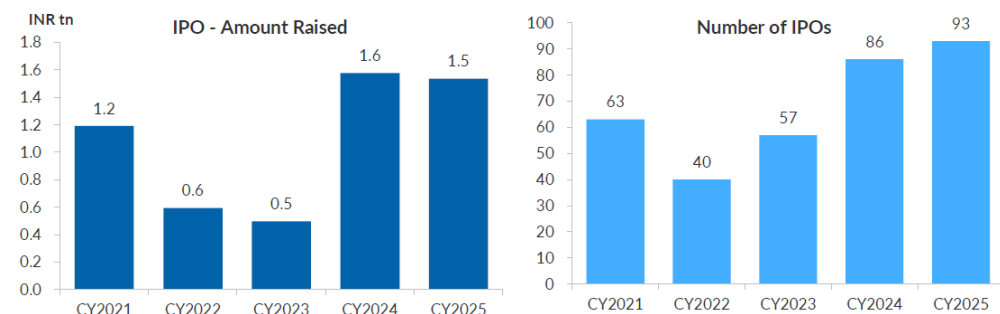

The India-US trade-deal delay adds a marginal export overhang, but domestic momentum remains intact, while the external backdrop has become more mixed with tightening financial conditions and volatile commodities.

Primary Issuances Adding to Pressure on Secondary Markets

Fund-raising momentum remains strong, with US\$ 24.5 bn YTD and US\$ 3.7 bn in November 2025, driven by a healthy mix of IPOs and QIPs. After a soft patch in August 2025 (Rs190bn) and September 2025 (Rs166.8 bn), activity rebounded sharply in October 2025 (Rs 428.8 bn) before moderating to Rs 330.3 bn in November.

Absorption has been steady, but the accelerating issuance calendar may start testing market depth.

Overall, while the market has digested supply so far, the combination of elevated valuations and rising fund-raising intensity could create near-term pressure and keep indices range-bound in our view.

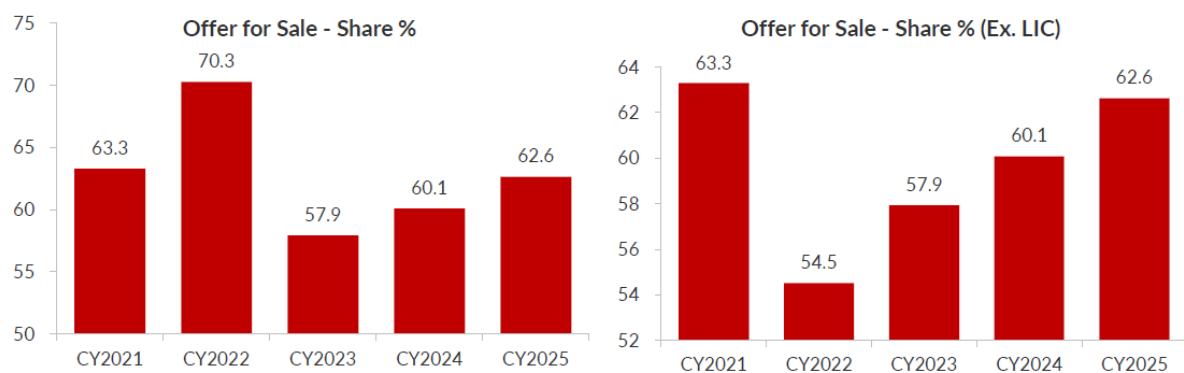

Source: Capitaline, YES Sec; Note: 2025 data is till November

Data as on November 25, 2025.

A concerning structural trend is the rising share of Offer for Sale (OFS) transactions whereby in CY2025, OFS accounted for nearly 63% of total IPO proceeds, underscoring that promoters and private equity investors are increasingly monetising valuations.

EQUITY MARKET OUTLOOK

Data as on November 25, 2025 | Note : CY22 had LIC OFS. Ex of that, share of OFS was at 54.5%.

Q2 Earnings Have Been Reasonable

Q2 earnings were resilient indicating steady recovery setup heading into Second Half (2H). Nifty 500 Index companies reported 15% yoy in 2QFY'26, led by strong earnings growth of metals and oil, gas & consumable fuels; excluding them, yoy earnings growth was 8%. Nonetheless, smaller sectors reported an improvement in sales growth, with 17/30 sectors reporting double-digit growth, even as aggregate sales growth was at mid single digit.

Amongst sectors

- Lenders are benefiting from a pick-up in credit growth, stabilising Net Interest Margins (NIMs), operating leverage, contained credit costs and benign asset quality across segments.
- Consumer Staples remained steady with premiumisation; consumer durables saw strong cables demand but softer cooling demand; discretionary categories like jewellery/paints/Quick Service Restaurants (QSRs) benefited from festive strength, and retail posted broad-based improvement in footfalls and ticket sizes— together signalling a firming consumption backdrop into 2H.
- Consumer Tech showed structural resilience, with festive-led Gross Merchandise Value (GMV) momentum, stronger ad monetisation, higher logistics utilisation and improved unit economics driving sequential margin gains.
- Autos recorded mid-single-digit growth with premiumisation intact, and tractors recovered on favourable rains.
- Agri inputs were weak due to erratic rainfall, but sentiment for Rabi improved on strong reservoir levels and Minimum Support Prices (MSP) hikes.
- Metals saw steel price pressure, while non-ferrous remained firm.

Economic Data Points remains promising:

- Real GDP growth surged to 8.2% YoY in Quarter Ended (QE) September 2025 (vs 7.8% in June 2025, consensus 7.3%), the strongest print in last 6 quarters. GVA was also solid at 8% but nominal growth stayed muted at 8.7% as the deflator slipped to 0.5%, its lowest since 2019. The beat was driven by manufacturing, professional services and public administration, helped by a low base and deflator effect.
- System non-food credit grew by 11.3% YoY for the fortnight ended 14th November 2025 (versus 11.1% YoY as of Oct 25) and deposit growth improved to 10.2% YoY (versus 9.8% YoY as of Oct 25). Loan-to-Deposit Ratio (LDR) stood at 80.3% (-15 bps MoM) and incremental LDR stood at ~88.6% (versus 79.04% YoY). On a YTD basis, system non-food credit growth stood at ~5.8% versus 6.4% in FY25YTD.
- October CPI inflation eased to 0.25% from 1.4% in September, due to a 5% yoy deflation in food and some impact of GST rate cuts across sectors. WPI inflation for October was (-1.2%) yoy (September: 0.1%).
- November 2025 Manufacturing PMI eased to 56.6 vs. 59.2 in the last month indicating slowest improvement in operating conditions since February 2025. While firms indicated that the outlook for international sales stayed positive, there was a slight decline in overall growth momentum.
- Center's fiscal deficit in 7M FY'26 stood at 53% of FY2026BE, driven by weak tax collection growth, a moderation in revenue expenditure and the normalization of capex pace (post front-loading). Trends in the expenditure mix, along with some in-built buffers, provide a cushion against slippages
- CPI headline inflation came in at 0.3% in Oct 25 vs 1.4% in Sep 25. Core CPI excluding food and fuel came at 4.4% in Oct 25 vs 4.5% in Sep 25.

The Road Forward

Market sentiments have meaningfully improved over the past two months on account of increased probability of US-India trade deal, reasonable Q2FY26 results, domestic macros appear to be improving, and credit growth recovery is apparent.

While we believe the earnings downgrade cycle has bottomed, the upgrade cycle remains constrained by: stagnation in services sector hiring (IT & BFSI) and lower nominal salary growth with slowdown in the investment cycle particularly due to likely fiscal pressure. Reforms to spur corporate capex across sectors, easing of regulatory bottlenecks and a stronger Balance of Payments (BOP) could act as the key catalysts.

We expect festive demand momentum in Q3 results along with logical conclusion of negotiation between US and India to bring calm to the market. We therefore remain positive on India equities over the next few quarters as the impact of a reasonably good monsoon, benign inflation and lower prices (due to GST reduction) play out. Rural wage growth have started showing meaningful signs of improvement which augers well for pick up in consumption in coming quarters.

Further, as geopolitical tensions ease and trade relationships normalise, we may expect the return of FPI investors. Key stock market triggers include US Fed and RBI monetary policy, trends in FII & FPI flows, developments in US-China trade deal and India-US trade deal, and other key global geopolitical cues. Risk includes sharper decline in INR currency thereby putting pressure on BoP and FX reserves.

EQUITY MARKET OUTLOOK

Scheme wise Fund Managers Commentary

Scheme	Portfolio commentary	Portfolio Positioning
JM Flexicap Fund	- We added 6 new stocks to our portfolio and sold 8 stocks. - Portfolio is underweight on materials, utilities, energy and overweight on BFSI, consumer discretionary and IT sector. - The Scheme saw some impact of higher single stock volatility in the healthcare and consumer discretionary sectors. The stocks we hold have multiyear growth visibility with strong managements and robust business models. We will use the volatility to add to our holdings into 2026.	- We expect portfolio to be more focused into 2026 till we see some evidence of broad basing in the market. - Markets now are very narrow, and it is impacting price discovery in the broader markets. However, this is typical progression where large caps lead the markets to new highs before the broader participation kicks in where SMID positioning gets rewarded. - We are adding to high profit growth names where we see low risks to growth. - Portfolio may continue focusing on financials and consumption.
JM Value Fund	- The Scheme had 3 additions and 6 deletions this month as we booked profits and redeployed them into names where results were strong but price action anemic. - The Scheme is overweight on consumer discretionary and industrials with an underweight on energy, pharma and materials sectors. - We are reasonably confident about our portfolio holding on its own going ahead. Small caps underperformance is becoming an opportunity for a value investor.	- We may add weights to smaller names in the portfolio where we see a valuation bottom and turnaround in sentiment. - We are also looking at special situations and turnaround as a theme in this Scheme. - We see GDP in H2 to bounce back as macros improve. - We are expecting markets to get more broad-based driven by earnings growth upgrades and the positioning of the Scheme will be kept with that fact in mind.
JM Large Cap Fund	- During the month, we sold 3 stocks as we focused on profit booking. - The portfolio kept pace with the benchmark. Industrials segment stock picks helped the portfolio.	- We have 83-84% in large caps and rest in SMIDs thus preparing the portfolio for market broad basing. - As FII selling slows, we may expect to focus more on financials, consumption and select industrial names.
JM Focused Fund	- We bought and sold 1 name each this month. - The Scheme suffered some stock specific volatility driven by financials, consumer discretionary and healthcare sectors.	- We continue to stick to high growth structural opportunity stance here. - We may add to new SMID names as we see better risk reward into H2.
JM ELSS Tax Saver Fund	- We have added 1 new stock this month and sold 2 stocks. - Longer term focus of the portfolio helping it navigate near term volatility much better. - Our confidence is validated by a balanced performance this month.	- We intend to keep the portfolio fairly balanced across sectors. - Focus remains on ideas across market caps which can demonstrate resilient earnings performance with higher growth over next 2 years.
JM Midcap Fund	- We added 3 new names this month and sold 6 as we accelerated profit booking to make way for few structural names. - Scheme saw some result related volatility across sectors.	- We are adding to stocks where there is a window of opportunity due to market volatility. - Focus would be on ideas which would deliver alpha over the longer term due to the inherent growth attributes of those respective businesses.
JM Small Cap Fund	- We have added 2 new stocks while we sold off 2 names. - The Scheme outperformed the benchmark driven by consumer discretionary, IT, industrials and materials.	- We are gravitating towards stronger high growth businesses where earning upgrades are likely going ahead. - We are on the look out for new names which can add alpha to the portfolio.
JM Large & Mid Cap Fund	- We bought and sold 2 stocks each here. - The Scheme faced some single stock volatility in healthcare and industrial sector but in general the portfolio is well balanced.	- We are aiming to be more sector neutral here this month. We may take strong sectoral biases in 2026 though. - We may take some tactical stock calls to generate alpha.
JM Aggressive Hybrid Fund	- We had 1 new addition in this Scheme and sold 3 stocks during the month. - The Scheme saw volatility as the SMID portion driven by results or capitulation. - We are using our conviction to benefit from this volatility to add to weights where we see the best rewards.	- We intend to strike a balance between Large and SMID sector in the medium term. Higher SMID weightage may help our performance vis-à-vis our peers as markets become more broad based in 2026. - We are keeping higher weight in equity as allowed by the asset allocation pattern given the time correction over the last 5 quarters.

Note: The above exposure/positioning is subject to change basis Fund Managers views & market conditions, but will be within the limits of the Scheme Information Document(s) of the respective Scheme(s).

Past performance may or may not be sustained in future and the same may not necessarily provide the basis for comparison with other investment.

H2 - stands for second half of the year, SMIDs- Small & Midcaps

Do the stars align for the Indian Consumer?

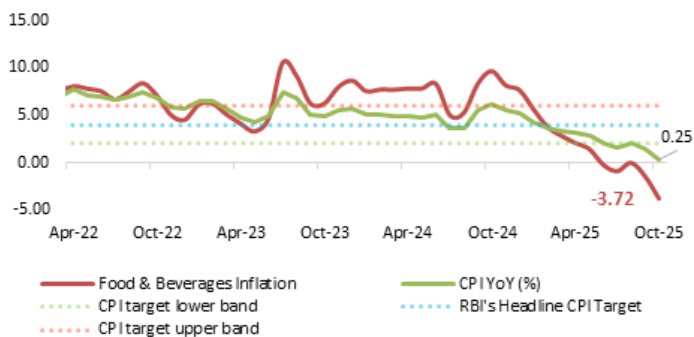

Details as on November 30, 2025

Benign Inflation + Robust Wages = Higher Consumption?

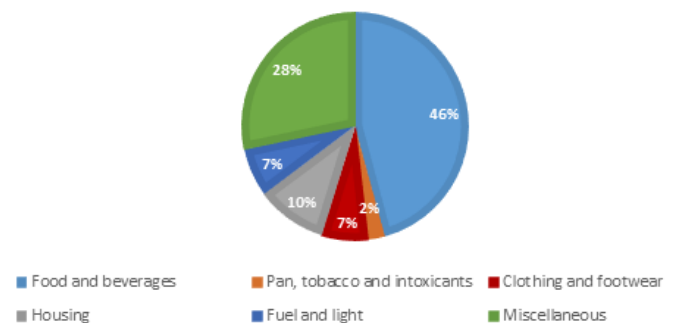

Consumer Price Inflation has remained benign this year, leaving behind more disposable income in the hands of consumers. Has real household income picked up, despite a benign inflationary environment? Here we shall review the reasons why benign inflation has not translated into increased real household income and what other factors are likely to stimulate household income and therefore, consumption going forth.

In October 2025, India witnessed its Consumer Price Index rise at a record low pace of 0.25%. This downward trajectory of price rise has mostly been driven by the decline in Food and Beverages (F&B) which has a weight of nearly 46% in the headline index. F&B witnessed a deflation of 3.72% in October 2025, which is the sharpest price decline since the series started. Vegetables, pulses & products and spices continued their deflationary trend at -28%, -16% and -3% respectively.

CPI at an all-time low, driven by deflation in Food & Beverages

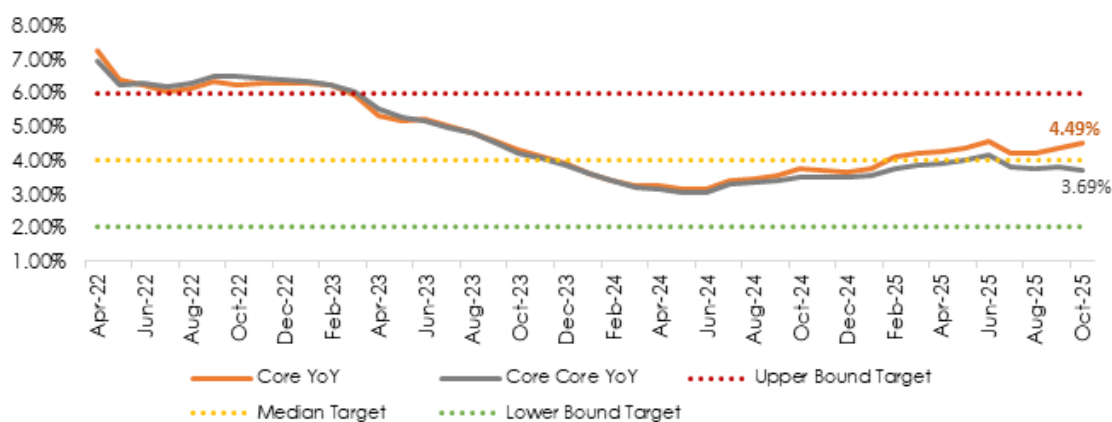

FOOD AND BEVERAGES OCCUPIES THE LARGEST SHARE IN THE CPI INDEX

Source: Ministry of Statistics and Programme Implementation (MoSPI), JMF MF Research

While the headline index attained an all-time low, the Core CPI (CPI excluding Food & Beverages and Fuel) has continued to show an upward trajectory. Core CPI for the month of October 2025 stood at 4.49% (YoY), up from 4.37% in September 2025. The chart below shows that the Core CPI has been primarily led by rising prices of bullion (gold & silver). While the Real Core Index (Core CPI excluding bullion and other fuels) has eased in the recent months, it is narrowly below the RBI's median target of 4%. From the beginning of 2025, it had been showing an upward trend, suggesting higher everyday costs of living such as education, transportation and health.

Core CPI above the median target, led by Bullion Prices

Source: MoSPI, JMF MF Research

The headline inflation index has a base year of 2011-12. Thus, the weights of the components in CPI reflect past consumption patterns. In the last 1.5 decades, consumption patterns have changed materially due to a shift in the circumstances and the environment.

As per the world bank database, India's GDP per capita [on a Purchasing Power Parity (PPP) adjusted basis] has witnessed a multifold growth of 2.5 times in only 13 years. Share of consumption of essentials such as food has fallen due to the robust pace of per capita income growth. This is evident from the Household Consumption Expenditure Survey (HCES) findings tabulated below:

Statement 3: Trend in share of consumption of cereals and food items since 2011-12: All-India				
Period	Rural		Urban	
	% share of cereals in avg. MPCE.	% share of food in avg. MPCE	% share of cereals in avg. MPCE	% share of food in avg. MPCE
2011-12	10.75	52.90	6.66	42.62
2022-23	4.91	46.38	3.64	39.17
2023-24	4.99	47.04	3.76	39.68

Source: MOSPI, Household Consumption Expenditure Survey (HCES) | Data as on November 30, 2025

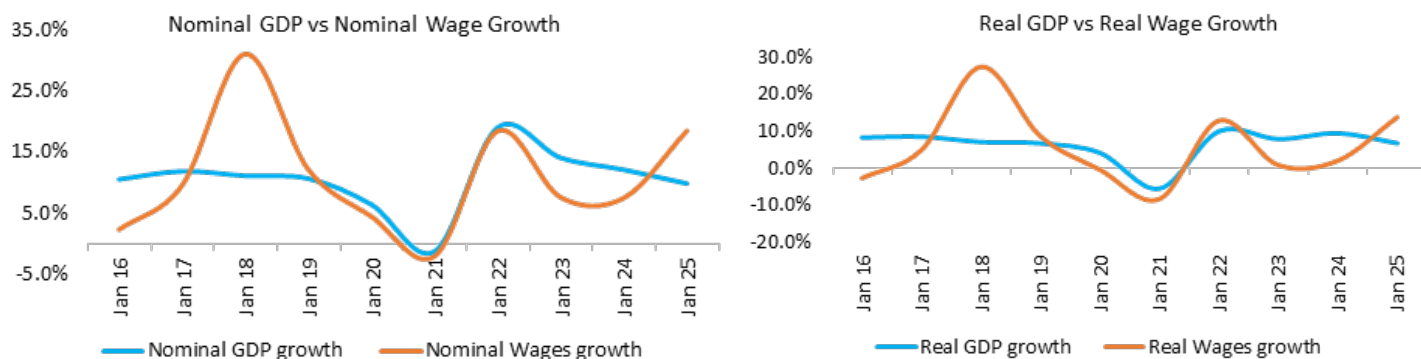

Consumers now have more discretionary income to spend on non-food items such as entertainment, consumer services, clothing, etc.

Consumption Patterns have changed

To account for changing consumption patterns, MoSPI is set to revise the base year from 2011-12 to 2024-25 with the following changes:

- The weight of the food basket that MoSPI finalizes shall be lower
- The number of items in the CPI basket is expected to rise from 299 items to reflect modern consumption habits. Item heads such as Over-the-top (OTT) media service streaming service subscriptions, prices of certain applications like mobility platforms and e-commerce platforms, are some of the new items that may be included.
- MoSPI is planning to include housing inflation of rural areas in the index, as surveys have noted an emergence of rental markets beyond urban areas.

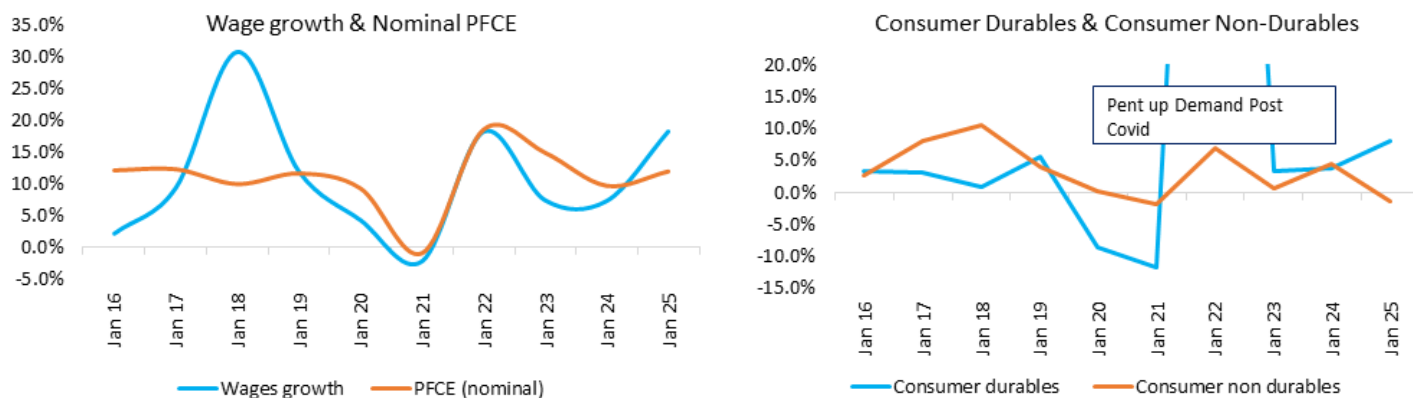

Wages growth outpaces GDP growth. Will consumption follow suit?

Source: CMIE, MoSPI, JMF MF Research | Data as on November 30, 2025

Wage growth has structurally picked up both on a nominal basis as well as on a real basis, compared to GDP growth as seen in the charts above. The recent monthly readings of wage growth since March 2025, has also been quite robust showing a probability of a pick-up in consumption or savings. However, it's important to keep in mind that real wage growth discounts the nominal wage growth by the inflation statistics provided by MoSPI and may not really be as rosy as the chart shows.

Will wage growth sustain and lead to growth in savings and expenditure?

Source: CMIE, MoSPI, JMF MF Research | Data as on November 30, 2025

In the chart above, growth in wages is driving the movement of private final consumption expenditure (PFCE). For the past decade, Compounded Annual Growth Rates (CAGR) of wages and nominal PFCE are 10.4% and 11.0% respectively. However, both variables are loosely correlated. Further, the growth in consumer durables is materially greater than the spending on non-durables.

Given this backdrop, the Government of India is taking a few **measures to increase the real disposable income**:

1) GST Reforms

The GST Rate Rationalisation introduced by the GST Council became effective on 22nd September 2025 during the festive season. Following the reforms, consumers are expected to spend more on goods and services as product prices fall due to lower tax rate rates. The improvement in wage growth along with benign inflation is expected to augur well for demand in the subsequent months.

2) 8th Pay Commission-

India's upcoming 8th Central Pay Commission (CPC) is expected to benefit ~1.1 crore government employees and pensioners. Analysts estimate that the potential payout of the 8th CPC could be in the range of ~2.4-3.2 trillion, roughly around 0.6%-0.8% of India's GDP, as per a Business Standard article.

The impact of the 8th Pay Commission will be seen around the end of financial year 2027. It's pertinent to note, the payouts will be with retrospective effect from January 1, 2026.

Given that around ~60% of the beneficiaries are pensioners, the revision can aim to restore purchasing power eroded by inflation over years and hence, boost consumption.

3) Revised Labour Codes-

The revised labour code would ensure higher basic pay, higher provident fund, wider social security coverage and other retirement benefits. Further, the labour code has been expanded to include gig and unorganized workers which will lead to an increase in the formalization of labour force.

These labour reforms are intend to provide adequate protection to gig workers and provide equal opportunities to women workers ensuring wage parity with male employees. This will likely improve not only the labour force participation rate but also the gender mix within the employed workforce.

A report by SBI pegs a consumption boost of Rs. 75,000 crores once the plan is in place and estimates unemployment rate to drop by 1.3% (additional employment generation of 77 lakh).

Conclusion:

Benign inflationary environments normally create favorable conditions for real wage growth and consumption. However, the pickup in consumption and savings is not commensurate to the low inflation rate, due to statistical differences. For consumers, everyday living costs have remained elevated as shown by the trend in Real Core CPI. Since consumption patterns are different now, MoSPI is considering a major overhaul to the inflation statistics in India. While real wage growth has surpassed real GDP growth, it continues to be driven by the lower inflation. What remains to be seen is whether the real wage growth momentum will sustain and will it translate into an increase in consumption and savings. Recent policies such as the GST rate revisions, 8th Pay Commission and the 4 new Labour Codes, bodes well for an increase in real disposable income and hence, greater purchasing power.

Details as on November 30, 2025

GLOBAL UPDATE

Global yields:

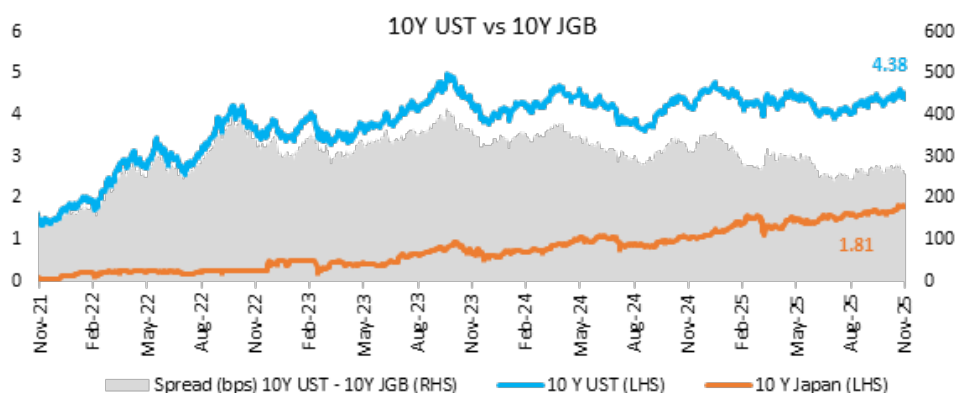

Global yields remained relatively volatile in the month of November 2025. During the month, 10Y UST bonds eased by 6 bps whereas 10Y JGB & 10Y German bund hardened by 16 bps & by 6 bps respectively in response to the respective countries domestic macro-economic data releases, political situation as well as Tariff related trade negotiations weighing heavily.

Source: Bloomberg, JMF MF Research | As per latest available data

US: The US yield curve steepened in November 2025 with rate cut expectations for December 2025 FED policy increasing and 2*30 yr closed at 1.17 bps vs 1.07 bps as of October 2025 end. Early November 2025 witnessed volatility as expectations of rate cut dimmed in absence of data releases on account of government shut down. Longer end of yield curve also saw some selling pressure due to concerns over supreme court ruling on tariffs. DXY saw divergent factors keeping it range bound, with EUR and CHF strengthening vs JPY and GBP weakening. September 2025 NFP data printed a mixed picture reflecting improvement in hiring with rise in unemployment rate (4.4%) which, along with risk off sentiments led to a fall in benchmark 10YUST by 3 bps. These factors had decreased the rate cut expectations in December 2025 policy which turned tables in last week of November 2025, with FOMC minutes hinting at an increase in the probability for rate cut and dovish comments by New York FED president Williams.

BOE maintained status quo for policy rate at 4% with a dovish sentiment.

Source: Bloomberg, JMF MF Research | As per latest available data

Japan: Expansionary fiscal policy led by new PM Sanae Takaichi announced a supplementary budget to the tune of JPY 21tn (approx. 3% of GDP). Japanese CPI inflation remains elevated at 3%. Minutes of BOJ indicated wage growth would be the deciding factor for more policy normalization and would require close monitoring. This was endorsed by a majority of members while two members supported divergent views of current policy normalization. With Japanese real rates at low levels and with further expectations to remain low has affected the USD/JPY to close at 156. Japan 30Y yields closed at 3.34% in November 2025 vs 3.04% in October 2025 and 10Y yields also saw a jump from 1.66% in October 2025 to 1.81% in November 2025.

DOMESTIC UPDATE

Bond and Money Markets:

Source: FBIL, Cogencis, JMF MF Research | As per latest available data

- The 10Y G-Sec traded in a band of 6.45%-6.52% and closed at 6.51% in November 2025.
- The yield curve steepened in the month of November 2025 where 30Y government bonds increased by 10 bps vs 3m rates decreased by 11 bps. Money market rates witnessed a pendulum movement with rate cut expectations building up for December 2025 policy on one hand and tight liquidity due to month end tax outflows and an extremely volatile rupee movement. The longer end of the curve continued to suffer from less demand from long end investors like insurances, EPFO and pension funds.
- RBI at its December 2025 policy cut Repo rate by 25ps to 5.25% retaining its neutral stance. Inflation forecast for FY'25-26 was lowered to 2% (2.6% - October 2025 policy) and GDP projection was hiked to 7.3% (6.8% - October 2025 policy), injecting durable liquidity through OMO's (current month 1 trillion) as well as 3Y USD/INR Buy/sell swap. This benign inflation-growth dynamics bodes well for bond markets.
- At Primary auctions, 91 Day T-Bill, 182 Day T-Bill & 364 Day T-Bill softened by ~9 bps, ~7 bps & 5 bps each.

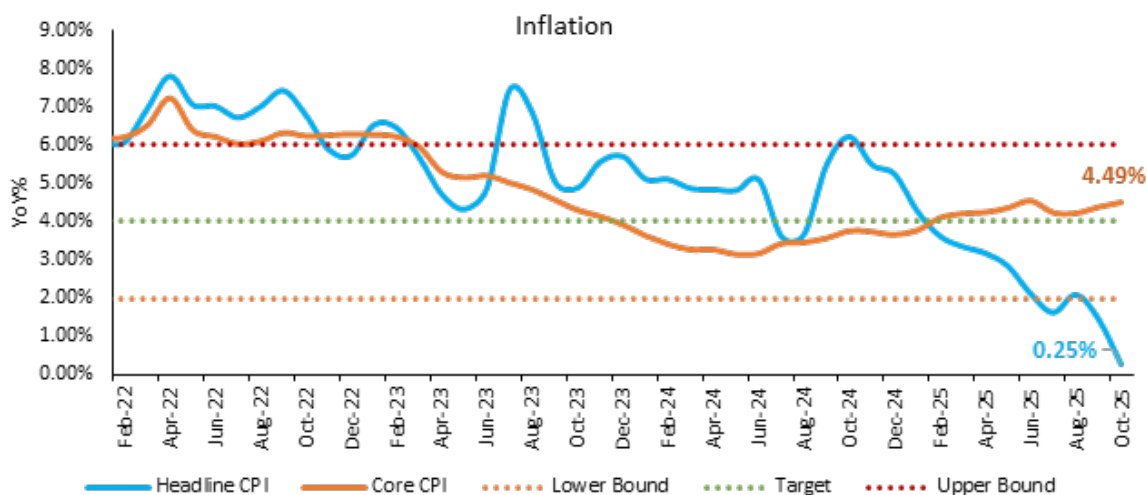

GDP: GDP growth at an 18-month high in Q2 FY'26

		GDP at constant prices YoY%

2%	Change in stocks	59.8	55.8	52.0	7.5	2.1	3.5	4.8	5.9	7.4	
1%	Valuables	-6.4	54.7	63.1	-23.1	25.8	-0.5	-29.8	-22.5	-22.7	
22%	Exports	4.6	3.0	7.7	8.3	3.0	10.8	3.9	6.3	5.6	
18%	Imports	14.3	11.3	11.4	-1.6	1.0	-2.1	-12.7	10.9	12.8	

Source: CMIE, JMF MF Research | As per latest available data

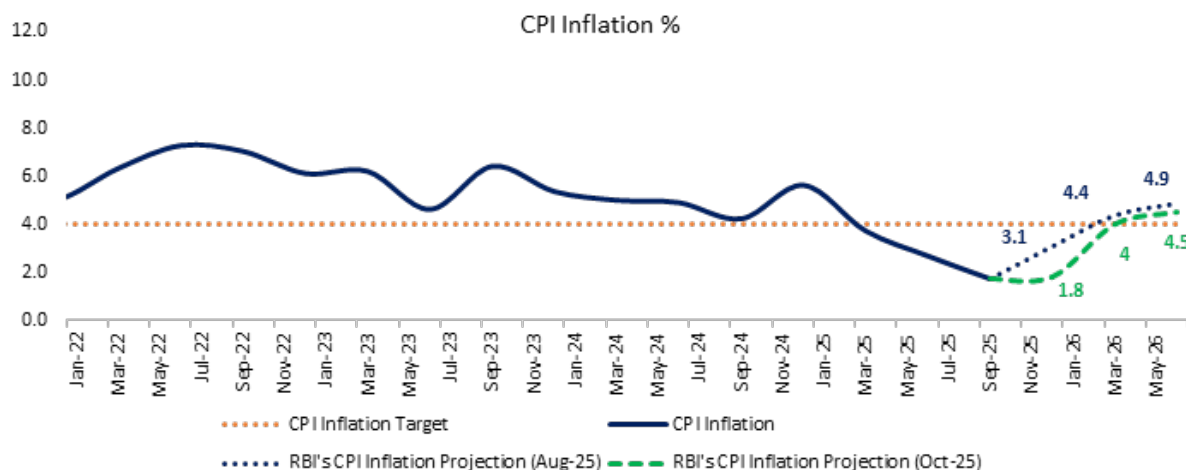

- Real GDP in Q2 FY'26 unexpectedly grew by 8.2%, above the robust growth of 7.8% in Q1 FY'26 and 5.6% in Q2 FY'25, largely led by a favorable base, stronger consumer spending and government capital expenditure (public capex).
- Private final consumption expenditure, which accounts for ~56% of the GDP, grew at the fastest pace in the last six quarters ending by 8.0%.
- Gross fixed capital formation (public + private capex) grew at a strong pace of 7.3% in Q2 FY'26, albeit moderated from 7.8% in Q1 FY'26.
- Due to external trade uncertainties, export growth remained muted at 5.6% in Q2 FY'26. This has been accompanied by a 12.8% (YoY) surge in imports which widened the loss in net export earnings. Thus, weighing down on the overall growth numbers.
- Overall, the numbers show domestic economic resilience in India amid external headwinds.

CPI inflation at an all-time low:

Source: MoSPI, CMIE, JMF MF Research | As per latest available data

- CPI inflation fell to a record low of 0.25% in October 2025, from 1.44% in September 2025. This reading was lower than the Bloomberg's median poll estimate of 0.40%.
- Food and beverages (F&B) witnessed a deflation of 3.72% in October 2025, which is the sharpest price decline in the F&B component. Vegetables, pulses & products and spices continued their deflationary trend at -28%, -16% and -3% respectively. Cereals & products, which is the highest weighted component in food and beverages basket, noted continued and sharp disinflation.
- Core CPI for the month of October 2025 stood at 4.49% (YoY), up from 4.37% in September 2025.
- Over the last 3 months, the average sequential change in headline inflation stood at 0.46%, which is higher than the 6-month sequential change of 0.40% and the 12-month average of 0.02%.

Source: MoSPI, RBI, JMF MF Research | As per latest available data | The projections provided herein are based on RBI MPC Policy.

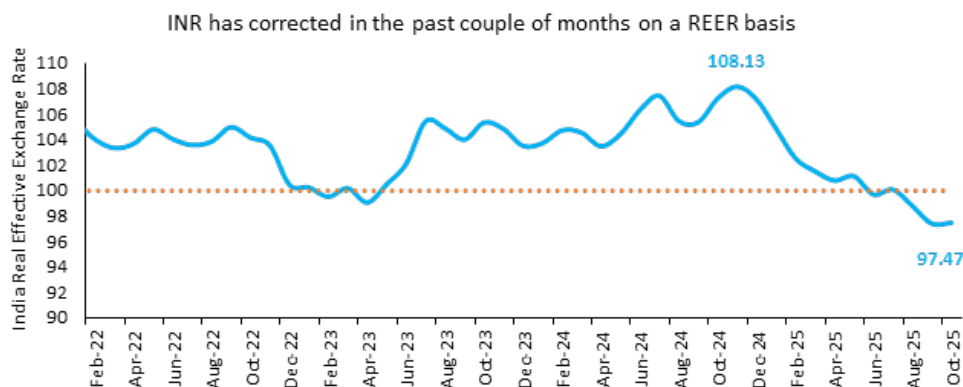

- RBI revised down its annual inflation projection for FY'26 to 2.6% from 3.1% in the October 2025 MPC meeting. Furthermore, the quarterly projections were also lowered for Q3 FY'26 to 1.8% (from 3.1% earlier), Q4 FY'26 to 4% (from 4.4% earlier), and Q1 FY'27 to 4.5% (from 4.9% earlier).

INR under pressure:

Currencies	USD/CNY	USD/INR	USD/JPY	EUR/USD	GBP/USD	DXY
30-Oct-25	7.11	88.70	154.13	1.16	1.32	99.53
30-Aug-25	7.13	88.21	147.05	1.17	1.35	97.77
30-May-25	7.20	85.58	144.02	1.13	1.35	99.33
30-Nov-24	7.25	84.49	149.77	1.06	1.27	105.74
01-Jan-25	7.30	85.65	157.24	1.04	1.25	108.49
30-Nov-25	7.07	89.46	156.18	1.16	1.32	99.46
Depreciation (-)/ Appreciation (+)	USD/CNY	USD/INR	USD/JPY	EUR/USD	GBP/USD	DXY
1M	0.52%	-0.85%	-1.33%	0.29%	0.64%	-0.07%
3M	0.82%	-1.42%	-6.21%	-0.75%	-1.99%	1.73%
6M	1.73%	-4.53%	-8.44%	2.21%	-1.66%	0.13%
1Y	2.38%	-5.87%	-4.28%	9.65%	3.93%	-5.94%
CYTD	3.09%	-4.45%	0.67%	11.99%	5.74%	-8.32%

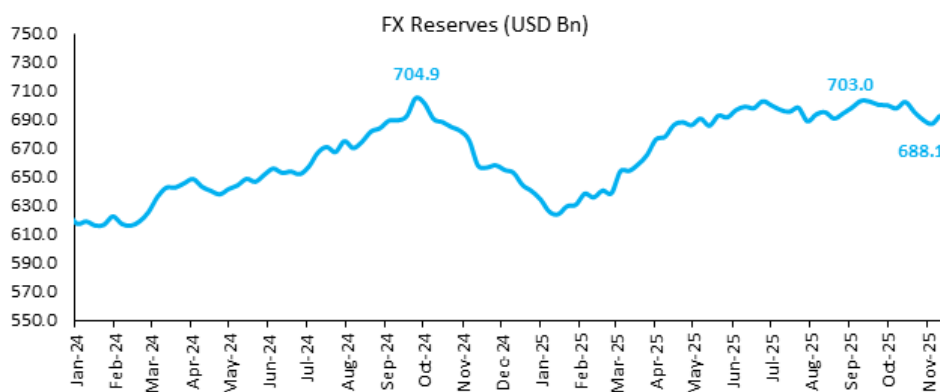

Source: Bloomberg, JMF MF Research | CYTD - Calender Year To Date | As per latest available data

- During the month of November 2025, DXY witnessed a mild depreciation of 0.07%. This is primarily due to the movement of foreign currencies in the DXY basket. While the Euro and GBP currency (which occupies a significant weight in the DXY basket) have appreciated by 0.29% and 0.64% respectively, this was offset by a depreciation in the Japanese Yen by 1.33% causing the DXY to remain relatively flat.
- On a CYTD basis, DXY has depreciated due to the levy of tariffs on US imports along with the appreciation of foreign currencies in the DXY basket. The Euro has been appreciating as investors seek new havens during the current geopolitical turmoil. The evolving trade dynamics and a potential trade war can impact US growth adversely. DXY could face more downward pressures from an elevated US fiscal deficit, expectations of rate cuts by the Federal Open Market Committee (FOMC) and a possible slowdown in economic growth.
- The INR witnessed a depreciation of 0.85% in November 2025. The currency traded in the range of Rs. 88.57-89.46/USD during the month and ended the month at record low of Rs. 89.46/USD.

Source: Bloomberg, JMF MF Research | As per latest available data

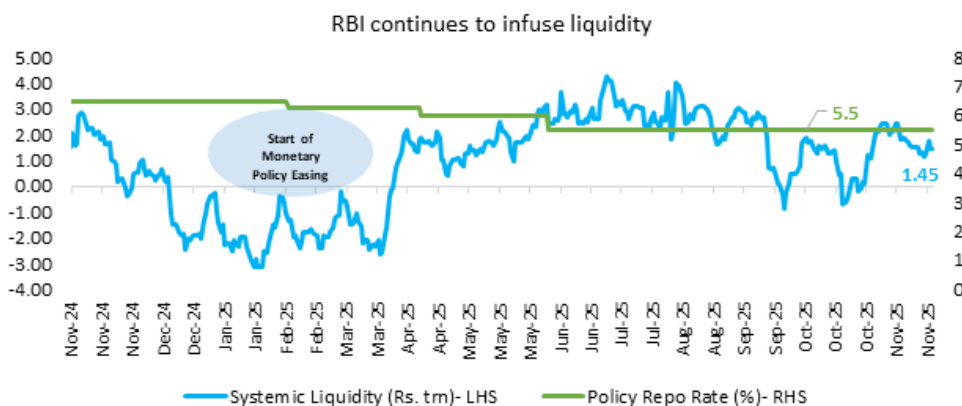

- In terms of the 40-currency real effective exchange rate (REER), INR is now undervalued (below 100), at a 7-year low of 97.47 after significantly coming down from its high in November 2024 (overvalued by 8.13%). Over the past 10 years, INR has been an overvalued by an average of 3.11%.
- In October 2025, FPIs were net buyers with an inflow of USD 527 Mn in the debt market offset by an outflow of USD 425 Mn in equity market.

Source: CMIE, JMF MF Research | As per latest available data

- Foreign Exchange (FX) reserve, after reaching a recent high of USD 703 bn, have moderated recently to USD 688.1 bn as on November 14, 2025. FX Reserves remains adequate to cover over 11 months of merchandise imports.

Systemic liquidity improves in November 2025:

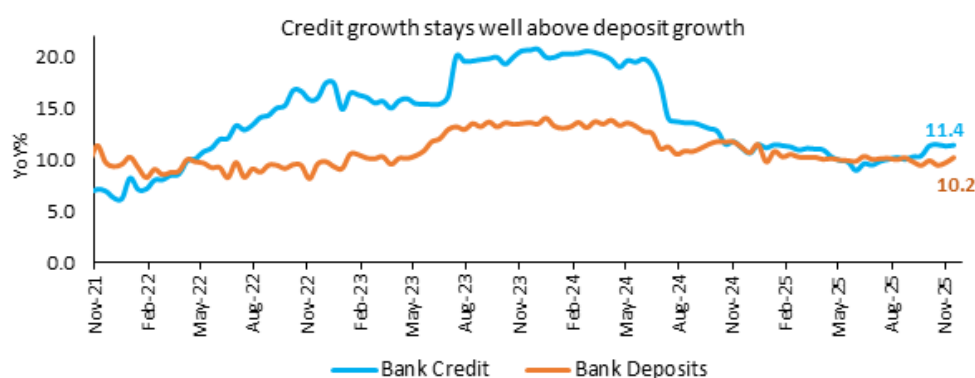

Source: RBI, JMF MF Research | As per latest available data

Details as on November 30, 2025

- In November 2025, systemic liquidity remained in surplus after being in tight conditions in the previous two months. The factors that have supported liquidity include the last two tranches of the 100bps cut in Cash Reserve Ratio (CRR) on November 1, 2025, and November 29, 2025.
- For the month of November 2025, average system liquidity has been in surplus of ~₹1.78 Trn per day, higher than the average daily surplus of ~₹0.86 Trn in September 2025.
- Since January 2025, RBI has taken active steps including Cash Reserve Ratio (CRR) cuts, open market operations (OMOs) purchases and USD/INR buy/sell swaps to infuse liquidity into the system.
- The CRR cuts in November 2025 have infused liquidity to the tune of ~₹1.25 Trn. Furthermore, RBI has restarted OMO purchases to the tune of ~₹0.27 Trn in November 2025. Going ahead RBI is expected to support liquidity and maintain systemic liquidity at ~1% of NDTL (Net Demand & Time Liabilities) for faster and smooth transmission of policy actions.

Bank Credit & Deposit Growth:

Source: RBI, JMF MF Research | As per latest available data

- In the fortnight ending November 14, 2025, bank credit grew by 11.4% on a year-on-year basis while bank deposits grew by 10.2%.
- On a FYTD basis, bank credit grew by 6.0% in FY'26 higher than 5.7% during FY25. On the other hand, deposit growth stayed at the same level of 6.7% as it was in the previous year on a FYTD basis. This implies a stronger pickup in credit growth than deposit growth.
- Credit-Deposit Ratio stood at 80.3 in the fortnight ending November 14, 2025, slightly better than 80.2 in the previous fortnight ending October 31, 2025.

Our takeaways:

Global:

- While we may see Fed delivering further cuts going ahead, we also believe Fed's actions are likely to be data driven.
- While BoJ has kept rates unchanged in its recent policy, it is likely to eventually continue its rate hike trajectory. The continuing unwinding yen carry trades may affect US yields adversely.
- The impact of tariffs on growth may be seen with a lag of a few quarters. We may note that further rate cuts by FOMC may take place in case of a sustained deterioration in growth or if labor markets materially weaken.
- China's continuing sluggish economy has support both from monetary and fiscal side to get its economy back on track. The resultant impact on commodity cycle upturn may be a development to be watchful of, especially for import dependent nations like India. During the month oil prices decreased and closed the month at ~USD 62.29 bbl.

Domestic:

- RBI continued to show consistent support to the economy through periodic liquidity measures resulting in systemic liquidity being in the surplus for most of the month. Such support from RBI is mentioned in the December 2025 policy, to increase monetary transmission of rate cuts but may be calibrated by RBIs intervention in the forex market to support INR.
- Post RBI monetary policy (5th December, 2025) bond markets may react to additional liquidity due to OMO purchases & 3yr USD/INR Buy-sell swap led inflows, FPI flows into bond markets, evolving GST reform related events and global cues such as UST rates, FOMC rate actions, crude oil prices and other geopolitical factors.
- Given the overall comfortable liquidity conditions, OMO purchases led inflows and a benign inflation projection, we may see bond participants continue to robustly participate at the shorter end of the curve.

FIXED INCOME MARKET OUTLOOK

Details as on November 30, 2025

Current Scheme Positioning:

We have strategically reduced duration across our portfolios and shifted towards selective carry assets, given the reasons mentioned above.

JM Liquid Fund

The Scheme continues to focus on enhancing accruals while aiming to keep appropriate mix of liquid and semi liquid money market assets.

JM Low Duration Fund

The Scheme aims to generate optimum risk adjusted returns in the current interest rate scenario. The Scheme has been deploying cash in securities between 6 months to 3 years to maintain an appropriate blend of accruals and duration in the portfolio. Overall, the scheme has invested in corporate bonds up to 3-year buckets to improve the accrual of the portfolio.

JM Short Duration Fund

The Scheme has reduced duration to ~2.25 years through a mix of government securities and AAA rated corporate bonds remaining within our internal guard rails (No exposure in non-AAA and no security > 5yr duration). The Scheme would continue to evaluate the macros to manage duration actively and maintain appropriate mix of asset class based on relative valuation to ensure optimum carry of the portfolio predominantly through 1-5 years AAA rated/Sovereign assets. We expect a continued steepening bias in the shape of the yield curve; hence, the scheme approach may deliver better performance.

JM Dynamic Bond Fund

The Scheme has strategically reduced its duration, given the current position of the interest rate cycle. The Scheme endeavours to assess the risk-reward parameters on a continuous basis and would actively manage duration in accordance with its mandate as the macros may require tweaking duration stance frequently.

JM Medium to Long Duration Fund

The Scheme has strategically pulled back its duration towards the lower end of the regulatory framework (SEBI mandate 4-7 years). The Scheme endeavours to assess the risk-reward parameters on a continuous basis and would actively manage duration in accordance with its mandate.

The above mentioned approach might change depending upon market conditions and Fund Managers views, but will be within the limits of the Scheme Information Document. Source: Bloomberg, Cogencis, RBI, Reuters, Refinitiv, investing.com, tradingeconomics.com

Past performance may or may not be sustained in future and the same may not necessarily provide the basis for comparison with other investment.

JM Short Duration Fund

An open-ended short duration debt scheme investing in instruments such that the Macaulay duration⁵ of the portfolio is between 1 year and 3 years. A moderate interest rate risk and moderate credit risk. Refer - \$ concept of Macaulay Duration.

Details as on November 30, 2025

FUND MANAGERS VIEW

The Scheme has reduced duration to ~2.25 years through a mix of government securities and AAA rated corporate bonds remaining within our internal guard rails (No exposure in non-AAA and no security > 5yr duration). The Scheme would continue to evaluate the macros to manage duration actively and maintain appropriate mix of asset class based on relative valuation to ensure optimum carry of the portfolio predominantly through 1-5 years AAA rated/Sovereign assets. We expect a continued steepening bias in the shape of the yield curve; hence, the scheme approach is likely to deliver better performance.

The aforementioned points do not indicate details as on any specific date. These are internal parameters set by JM Financial Asset Management Ltd for the purpose of managing this Scheme and may change anytime without prior intimation.

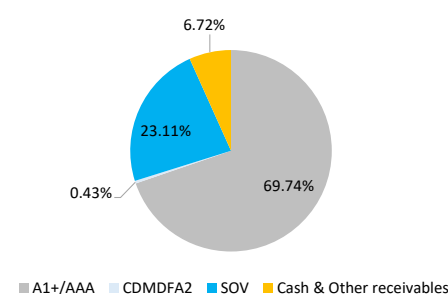

INVESTMENT OBJECTIVE

The Scheme will endeavor to generate stable returns with a low risk strategy while maintaining liquidity through a portfolio comprising of debt and money market instruments. Investors are required to read all the scheme related information carefully and also note that there can be no assurance that the investment objectives of the scheme will be realized. The scheme does not guarantee/ indicate any returns.

\$ Concept of Macaulay Duration: The Macaulay duration (named after Frederick Macaulay, an economist who developed the concept in 1938) is a measure of a bond's sensitivity to interest rate changes. Duration tells investors the length of time, in years, that it will take a bond's cash flows to repay the investor the price he or she has paid for the bond. Fixed income securities with higher duration have higher interest rate sensitivity i.e. the changes in price of higher duration bonds are higher as compared to lower duration ones. A zero coupon bond is one which does not pay any interest and all payments are received at maturity. For a zero coupon bond, the duration is same as residual maturity. **Formula:** There is more than one way to calculate duration, but the Macaulay duration is the most common. The formula is:

$$\text{Macaulay Duration} = \frac{\sum_{t=1}^n \left(\frac{tC}{(1+y)^t} + \frac{nM}{(1+y)^n} \right)}{P}$$

where: t = period in which the coupon is received, C = periodic (usually semiannual) coupon payment, y = the periodic yield to maturity or required yield, n = number periods, M = maturity value (in ₹), P = market price of bond

Notes: Duration is quoted in "years." If a bond has a semi-annual period, we convert duration to years before quoting it (a duration of 8 semi-annual periods is 4 years). Duration is a measure of interest-rate risk. Or, stated differently, duration is a measure of how sensitive the price of a fixed-income instrument is to interest-rate changes. When we say, "The duration of the bond is 4 years," we mean: "If the interest rate on the bond goes up by 1%, the bond's price will decline by 4%."

JM Dynamic Bond Fund

An open ended dynamic debt scheme investing across duration. A relatively high interest rate risk and moderate credit risk.

Details as on November 30, 2025

FUND MANAGERS VIEW

The Scheme has strategically reduced its duration, given the current position of the interest rate cycle. The Scheme endeavours to assess the risk-reward parameters on a continuous basis and would actively manage duration in accordance with its mandate as the macros may require tweaking duration stance frequently.

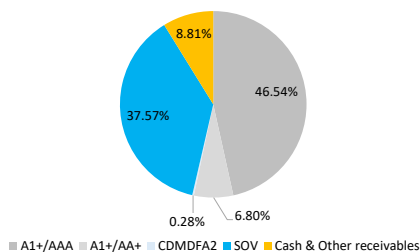

INVESTMENT OBJECTIVE

The investment objective will be to actively manage a portfolio of good quality debt as well as Money Market Instruments so as to provide reasonable returns and liquidity to the Unit holders. Investors are required to read all the scheme related information carefully and also note that there can be no assurance that the investment objectives of the scheme will be realized. The scheme does not guarantee/ indicate any returns.

JM Low Duration Fund

An open ended low duration debt scheme investing in instruments such that the Macaulay duration⁵ of the portfolio is between 6 to 12 months. A relatively low interest rate risk and moderate credit risk. Refer - \$ concept of Macaulay Duration.

Details as on November 30, 2025

FUND MANAGERS VIEW

The Scheme aims to generate optimum risk adjusted returns in the current interest rate scenario. The Scheme has been deploying cash in securities between 6 months to 3 years to maintain an appropriate blend of accruals and duration in the portfolio. Overall, the scheme has invested in corporate bonds up to 3-year buckets to improve the accrual of the portfolio.

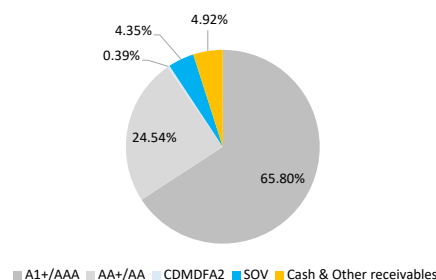

INVESTMENT OBJECTIVE

To generate stable long term returns with low risk strategy and capital appreciation/accretion besides preservation of capital through investments in Debt & Money Market instruments such that the Macaulay duration⁵ of the portfolio is between 6 months - 12 months. Investors are required to read all the scheme related information carefully and also note that there can be no assurance that the investment objectives of the scheme will be realized. The scheme does not guarantee/ indicate any returns.

\$ Concept of Macaulay Duration: The Macaulay duration (named after Frederick Macaulay, an economist who developed the concept in 1938) is a measure of a bond's sensitivity to interest rate changes. Duration tells investors the length of time, in years, that it will take a bond's cash flows to repay the investor the price he or she has paid for the bond. Fixed income securities with higher duration have higher interest rate sensitivity i.e. the changes in price of higher duration bonds are higher as compared to lower duration ones. A zero coupon bond is one which does not pay any interest and all payments are received at maturity. For a zero coupon bond, the duration is same as residual maturity. **Formula:** There is more than one way to calculate duration, but the Macaulay duration is the most common. The formula is:

$$\text{Macaulay Duration} = \sum_{t=1}^n \left(\frac{tC}{(1+y)^t} + \frac{nM}{(1+y)^n} \right) \frac{1}{P}$$

where: t = period in which the coupon is received, C = periodic (usually semiannual) coupon payment, y = the periodic yield to maturity or required yield, n = number periods, M = maturity value (in ₹), P = market price of bond

Notes: Duration is quoted in "years." If a bond has a semi-annual period, we convert duration to years before quoting it (a duration of 8 semi-annual periods is 4 years). Duration is a measure of interest-rate risk. Or, stated differently, duration is a measure of how sensitive the price of a fixed-income instrument is to interest-rate changes. When we say, "The duration of the bond is 4 years," we mean: "If the interest rate on the bond goes up by 1%, the bond's price will decline by 4%."

JM EQUITY SCHEMES AT A GLANCE

Details as on November 30, 2025

No Entry Load and treatment of Exit Load.

In accordance with the requirements specified by the Paragraph 10.4 of SEBI Master Circular for Mutual Funds dated June 27, 2024 ("Master Circular"), no entry load is being charged for fresh purchase / additional purchase / switch-in transactions accepted by the Fund with effect from August 1, 2009. Similarly, no entry load is being charged with respect to applications for fresh registrations under Systematic Investment Plan/Systematic Transfer Plan accepted by the Fund with effect from August 1, 2009.

Also, in compliance with Paragraph 10.4 of SEBI Master Circular, parity among all classes of unit holders in terms of charging exit load is made applicable at the portfolio level with effect from August 24, 2009.

Load Structure:

Entry Load: NIL for all Open-ended Equity Schemes.

Exit Load: As mentioned in the table hereunder:

Sr. no.	Schemes	Inception Date	Minimun Purchase	Additional Purchase	Exit Load @@@	Lock-in Periods @@@	Redemption Time#
1	JM Arbitrage Fund	July 18, 2006	₹ 1000/- and in multiples of ₹ 1 thereafter.	₹ 100/- and in multiples of ₹ 1 thereafter.	0.50%	30 Days	T+2 Business Days
2	JM Aggressive Hybrid Fund	April 1, 1995			1.00%	60 Days	T+2 Business Days
3	JM Value Fund	June 2, 1997			1.00%	30 Days	T+2 Business Days
4	JM Focused Fund	March 5, 2008			1.00%	30 Days	T+2 Business Days
5	JM Large Cap Fund	April 1,1995			1.00%	30 Days	T+2 Business Days
6	JM Flexicap Fund	September 23, 2008			1.00%	30 Days	T+2 Business Days
7	JM Midcap Fund	November 21, 2022			1.00%	180 days	T+2 Business Days
8	JM Small Cap Fund	June 18, 2024			1.00%	180 days	T+2 Business Days
9	JM Large & Mid Cap Fund	July 25, 2025			1.00%	180 days	T+2 Business Days
10	JM ELSS Tax Saver Fund	March 31, 2008	Rs. 500/- or in multiples of Rs. 500/- each		NIL	&&	T+2 Business Days

&& JM ELSS Tax Saver Fund :- The scheme falls in the ELSS category and is eligible for tax benefits under section 80C of Income Tax Act. There is a lock-in period of 3 years under the Scheme.

AMC would adhere to the aforesaid service standards for redemption payments on best efforts basis under normal circumstances subject to the overall 3 business days as stipulated by SEBI. The redemption payout may be deferred in line with the settlement cycle/s of the stock market and/or money market in case of intervening Bank holiday/s in Mumbai.

@@@ The exit load shown in the above table are applicable for allotment of units for investment made through fresh purchases/switch-in/shift-in or through respective SIP/STP/SWP Instalments out of the fresh registration effected during the period when above exit load rates are applicable. The exit load are subject to change at any time. Hence, all Investors are advised to check the current exit load from the nearest Investor Service Center before investment.

Minimum criteria for Redemption/Switch-outs

There is no minimum criteria for any number of units.

However, in case of switch transaction, the minimum investment provisions of the switch-in scheme/plan i.e. for fresh/additional purchase, shall continue to be applicable. In the event of failure to meet the requirement of switch-in scheme/plan, such switch requests will be treated as cancelled/rejected.

In case of Equity Schemes (except JM ELSS Tax Saver Fund), if an investor fails to specify his preference of Option or in case of any ambiguity in the Transaction Slip/ Application Form about the desired Option, the default option would be the Growth Option. In case, an investor specifies his preference to IDCW option and/or fails to specify his preference of sub-option, the default option would be the IDCW Option of the scheme and the default sub-option will be reinvestment.

In case, the investor mentions the word "Direct" on any part of the application/transaction-slip, default Plan will be considered as Direct Plan.

Load structure :

A) Exit load on intra-scheme redemptions/switch outs :

The applicable exit load, if any, will be charged for redemptions/ switch outs of the scheme (i.e. at portfolio level) before the completion of the stipulated load/ lock-in period. The stipulated load/ lock-in period will be reckoned from the date of allotment of units for a particular transaction in the scheme (i.e. at portfolio level) till the date of redemption / switch out from that scheme (at Portfolio Level), irrespective of the number of intra-scheme switches by the investor between the aforementioned two dates (e.g. switches between plans/sub-plans/options/sub-options within the scheme having the same portfolio). The extant provisions of applicability of load on redemptions/ switches from one Scheme to another will continue to be applicable subject to the exemption mentioned in below mentioned para.

B) In case of Intra & Inter equity switches: (including SIP/STP):

No exit load for inter and intra equity switches except in case of (i) switches by SIP/STP investors within 24 months (for cases registered from 4.1.2008 up to 2.10.2008) and within 12 months (for cases registered upto 3.1.2008) of respective SIP/STP installments (ii) switches by STP investors (for cases registered w.e.f. 3.10.2008) within 24 months of respective STP installments (iii) switches by SIP investors (for cases registered w.e.f. 3.10.2008) within 12 months of respective SIP installments (iv) switches to / from JM Arbitrage Fund to any equity schemes.

However, Government levies eg. STT (wherever applicable) will continue to be deducted for every intra-scheme and inter-scheme switch-out/redemption transactions under A) & B) above.

IDCW i.e Income Distribution cum Capital Withdrawal is the new name for Dividend as per recent SEBI Guidelines. The investors may read and decipher accordingly.

The above details are subject to provisions laid down in the respective Scheme Information Documents, Statement of Additional Information for all schemes and Addenda issued from time to time.

JM DEBT SCHEMES AT A GLANCE

Details as on November 30, 2025

Load Structure:

Entry Load: NIL for all Open-ended Debt & Liquid Schemes.

Exit Load: As mentioned in the table hereunder:

Sr. no.	Category of Scheme	Schemes	Minimum Purchase	Additional Purchase	Exit Load @@@	Lock-in Periods @@@	Redemption Time#
1	Liquid	JM Liquid Fund	₹ 1000/- and in multiples of ₹1 thereafter.	₹ 100/- and in multiples of ₹1 thereafter.	Refer Note below	NA	T+1 Business Day
2	Overnight	JM Overnight Fund			NIL	NA	T+1 Business Day
3	Debt	JM Dynamic Bond Fund			NIL	NA	T+1 Business Day
4		JM Medium to Long Duration Fund			NIL	NA	T+1 Business Day
5		JM Low Duration Fund			NIL	NA	T+1 Business Day
6		JM Short Duration Fund			NIL	NA	T+1 Business Day

AMC would adhere to the aforesaid service standards for redemption payments on best efforts basis under normal circumstances subject to the overall 3 business days as stipulated by SEBI. The redemption payout may be deferred in line with the settlement cycle/s of the stock market and/or money market in case of intervening Bank holiday/s in Mumbai.

@@@ The exit load shown in the above table are applicable for allotment of units for investment made through fresh purchases/switch-in/shift-in or through respective SIP/STP/SWP Instalments out of the fresh registration effected during the period when above exit load rates are applicable. The exit load are subject to change at any time. Hence, all Investors are advised to check the current exit load from the nearest Investor Service Center before investment.

In case of debt and liquid schemes (except JM Medium to Long Duration Fund), if an investor fails to specify his preference of Option or in case of ambiguity in the Transaction Slip/ Application Form about the desired Option, the default option would be Daily IDCW Option and the Default Sub-Option would Reinvestment. In case of JM Medium to Long Duration Fund, the default option would be the Growth Option and the default sub option would be Reinvestment. In case, the investor mentions the word "Direct" on any part of the application/transaction-slip, the default Plan will be the Direct Plan.

In case of purchase transactions, where there is a mismatch in the amount on the Transaction Slip / Application Form and the payment instrument / credit is realised /received, the AMC may at its discretion allot the units for the lesser of the two amount and refund / utilize the excess amount, if any, for any other transaction submitted by the same investor, subject to the fulfillment of other regulatory requirements for the fresh transaction in the respective scheme.

In case, the investor does not mention the name of the Plan/ Option/ Sub-option/or wherever there is an ambiguity in choice of Plan/ Option/ Sub-option opted for purchase/ switch application(s), the AMC/ Registrar may allot the units as per default Plans/ Options/ Sub-options, if no clarificatory letter is provided by the investor on the transaction date. However, in case of fresh purchase application, the AMC/ Registrar at its discretion may allot the units based on the Plan/ Option/ Sub-option appearing on the respective payment instrument.

Note: Levy of exit load in JM Liquid Fund. Following exit load structure is applicable under JM Liquid Fund as per SEBI guidelines.

Existing exit load structure	Investor's exit upon subscription	Revised Exit Load Structure
NIL	Day 1	0.0070%
	Day 2	0.0065%
	Day 3	0.0060%
	Day 4	0.0055%
	Day 5	0.0050%
	Day 6	0.0045%
	Day 7 onwards	0.0000%

The above exit load is applicable for allotment of units for investment made through fresh purchase / switch-in from other Schemes or for SIP/STP/SWP instalments falling due on or after the above mentioned effective date, irrespective of the date of registration.

Cut-off timings for the applicability of NAV in JM Liquid Fund and JM Overnight Fund

Pursuant to Paragraph 8.4.5 of SEBI Master Circular, the cut-off timings for applicability of Net Asset Value (NAV) in respect of purchase of units in JM Liquid Fund and JM Overnight Fund is 1:30 p.m. for all the purchase applications time-stamped w.e.f. October 20, 2019 subject to the receipt of credit of respective funds into the scheme's account before the above mentioned stipulated cut off time.

@ Additional Performance Note:

- Different plans shall have a different expense structure. The performance details have been provided for Regular Plan and Direct Plan separately.
- Returns are Compounded Annualised Growth Rate Returns, with reinvestment of IDCW, if any, unless otherwise mentioned.
- In cases where there has been a change in the benchmark indices of the existing Schemes, the current benchmark has been used for calculating the returns since inception.
- Returns of benchmark indices since inception date of the Schemes are not available in some cases as the benchmark indices were launched / changed subsequent to the inception date of the Scheme(s).
- For the purpose of calculating returns, inception date is deemed to be the date of allotment of the units.
- In plans/options/sub-options, where there were no units on the date of inception, the first NAV has been considered when units were allotted consequently.
- The Direct Plans of the Schemes were launched in January, 2013. The returns since inception for these plans have been considered accordingly.

NA: Not Available. Source: MFI Explorer. Assuming ₹ 10,000 invested systematically on the first Business Day of every month over a period of time. CAGR returns are computed after accounting for the cash flow by using XIRR method (investment internal rate of return). Load is not taken into consideration for computation of performance. The above investment should not be construed as a promise on minimum returns and safeguard of capital. The AMC / Mutual Fund is not guaranteeing or promising or forecasting any returns. SIP does not assure a profit or guarantee protection against a loss in a declining market. Since Overnight/Liquid Funds are meant for parking short term funds, SIP Performance details are not provided, which as a facility is long term in nature. Since Inception Date = Date of First allotment in the Scheme / Plan. The returns are provided for both the Regular and Direct plans. SIP Performance of benchmark indices since inception date of the Schemes are not available in some cases as the benchmark indices were launched / changed subsequent to the inception date of the Scheme(s). **The returns are not computed for JM Large & Mid Cap Fund since the scheme has not completed six months of performance from its inception.**

RISK-O-METER (EQUITY SCHEMES)

Details as on November 30, 2025

This Product is suitable for investors who are seeking*

DATE : NOVEMBER 06, 2025

REF No. 38/2025-26

Notice of change in Base Total Expense Ratio (TER) of certain Schemes of JM Financial Mutual Fund.

Notice is hereby given that in accordance with Paragraph 10.1.8 of SEBI Master Circular SEBI/HO/IMD/IMD-PoD-1/P/CIR/2024/90 dated June 27, 2024 (hereinafter referred as "SEBI Master Circular") on Total Expense Ratio – Change and Disclosure, the Base Total Expense Ratio (TER) (i.e. TER excluding additional expenses provided in Paragraph 10.1.7 of SEBI Master Circular) of the following schemes/plans will change with effect from November 21, 2025.

Schemes/Plans	Base TER	
	From	To
JM Aggressive Hybrid Fund - Direct Plan	0.54	0.56
JM Large Cap Fund - Direct Plan	0.67	0.69
JM Value Fund - Direct Plan	0.81	0.83
JM Midcap Fund - Direct Plan	0.41	0.43
JM Small Cap Fund - Direct Plan	0.48	0.50
JM Flexicap Fund - Direct Plan	0.43	0.44
JM ELSS Tax Saver Fund - Direct Plan	0.93	0.89

Investors can visit our website, www.jmfinancialmf.com, for disclosures pertaining to the Total Expense Ratio (TER) displayed on the homepage under Scheme Expense Ratio. It is important for investors to be aware that the Base TER mentioned above does not include applicable statutory levies.

For complete details, kindly refer REF NO. 392025-26 Notice - Change in Base TER of Schemes of JMF MF (w.e.f. November 21, 2025).
